LARAVEL DEVELOPER

Laravel Developer with 2+ years of experience building scalable, real-time web platforms. Strong focus on clean architecture, RESTful APIs, and full-stack implementation using Vue.js and Alpine.js.

Proven ability to lead from R&D to deployment with a user-first mindset and strong debugging skills. Experienced in third-party API integration, secure payment gateways, and performance optimization. Quick learner with strong problem-solving skills and a passion for delivering clean, maintainable code.

Projects

Katalog

Project Description:

Developed a Laravel 12-based platform with a Vue.js starter kit that allows users to search car parts by vehicle registration number. Implemented a custom quote request system where users can add items to a cart and submit for admin review. Built a Magento-inspired admin panel to manage stock, product attributes, categories, and users. Integrated group-based user management with special discount logic for personalized pricing and improved customer experience.

My Contribution:

- Designed and built the admin panel scaffolding using Tailwind CSS, with a dashboard showcasing key metrics like top-selling products, category/user/product counts, and detailed earnings (yearly, monthly, per product). Design the database tables and develop the models and schema
- Created a complete database schema and implemented full CRUD operations for users, user groups, categories, subcategories, attributes, quotations, special pricing, and group-tier discounts.
- Conducted R&D to learn Vue.js from scratch and successfully built the frontend using Vue Router and Inertia.js, including a dynamic product listing page, checkout flow, and Pinia-based state sharing between components.
- Implemented a bulk data import solution to dump over 400,000 client product records into the PostgreSQL database via optimized chunk-based CSV processing with a custom Artisan command.

Tech Skills:

- Laravel 12, RESTful API Development, Vue.js, Pinia, Tailwind CSS, Bulk Data Handling, Chunked CSV Import

Factsscan

Project Description:

Collaborated on building the backend and admin panel for a food scanning app that analyzes product ingredients and nutritional data. Implemented a grading system (A–E) to assess food quality and suggest healthier alternatives. Enabled guest access, user history tracking, and a point-based contribution system with leaderboard rankings. Developed RESTful APIs for seamless integration with a React Native frontend.

My Contribution:

- Set up the initial scaffolding of the admin panel using Laravel, including layout, roles, and modular structure.
- Implemented CRUD operations for managing raw products, categories, brands, users, user reviews, favorite products, allergens, ingredients, and nutrition data.
- Developed authentication APIs with OTP-based login/registration and guest user support using device_token.
- Built product listing APIs with filters for categories, brands, and user preferences.
- Created a barcode-based product lookup API and a separate contribution API for users to upload new products if not found.
- Integrated a leaderboard API showcasing top contributors based on earned points.

Tech Skills:

- Laravel, RESTful API Development, MySQL, Git, cPanel.

Desi deli

Project Description:

Developed a multi-vendor e-commerce platform focused on delivering Indian products to customers in the USA and Canada. Implemented an IP-based pricing and currency system using the IPInfo API to dynamically display prices in INR or USD based on the user's location. Built a vendor-specific inventory system where Indian vendors list in Rupees and international vendors in Dollars. Developed customized checkout pages using Alpine.js, and integrated Razorpay for Indian users and Stripe for international transactions, ensuring a smooth and localized shopping experience.

My Contribution:

- Fixed existing bugs and enhanced overall platform stability.
- Implemented IP-based currency and pricing system using the IPInfo API to display prices in INR or USD based on user location.
- Integrated Razorpay payment gateway for checkout and refund processing, including refund and product return functionalities.
- Added export/import CSV functionality for admin and vendor roles on all key tables, improving data management and role-based access.
- Developed variant-based purchase options to support different product variations seamlessly.

Tech Skills:

- Laravel, Alpine.js, MySQL, Payment Gateways: Stripe, Razorpay, APIs: IPInfo API
