Summary

I am a Laravel developer with over 2+ years of professional experience. I have worked on various projects, bringing strong problem-solving skills and a commitment to quality. Here's a summary of my work and the products I've contributed to so far

SKILLS Areas

- ❖ **Php, Laravel, MySQL**
- ❖ **HTML, CSS, Bootstrap**
- ❖ **Javascript, JQuery, Ajax**
- ❖ **Alpine JS, Livewire**
- ❖ **API Development (Postman, GraphQL)**
- ❖ **Payment gateway integration (Stripe, Razor Pay)**
- ❖ **Github, GitLab, Bitbucket**

EDUCATION

- ❖ **MCA | Marwadi Education Foundation and Group of Institute - Rajkot**
CGPA: 8.21 | (07/21 - 04/23)
- ❖ **BCA | Sarvodaya College of Computer Science - Rajkot**
CGPA: 7.97 | (06/18 - 06/21)

EXPERIENCE

- ❖ **Trainee Laravel Developer | WebCodeGenie Technology Pvt Ltd** *(01/23 - 05/23)*
- ❖ **Jr Laravel Developer | Dolphin Web Solutions** *(05/23 - Present)*

PROJECTS

- ❖ **Factsscan**
 - Collaborated with a team to develop APIs and an admin panel for scanning food packages to provide detailed food information.
 - Implemented a grading system (A to E) to evaluate food quality, displaying nutrition and ingredient details, and offering alternative product recommendations if scanned items are deemed unhealthy.
 - Enabled guest user access without login and provided user history tracking for logged-in users.
 - Developed a feature allowing users to upload unrecognized products to earn points, with a leaderboard showcasing monthly and all-time top users based on

points.

- Built RESTful APIs and an admin panel to manage product data, user contributions, and leaderboard rankings, ensuring seamless integration with the React Native frontend.

❖ **Desi deli** - <https://www.thedesideli.com>

- Developed an e-commerce platform offering a wide range of Indian products to customers in the USA and Canada.
- Implemented IP-based pricing to display product prices according to the user's location, utilizing a third-party API for IP information.
- Ensured a seamless shopping experience by tailoring product availability and pricing based on regional data.
- Developed new, user-friendly checkout pages using Alpine.js, a JavaScript framework I learned specifically for this project.

❖ **Trust Beauty** - <https://trustbeauty.co.uk/>

- Developed Trust Beauty project, enhancing salon businesses.
- Simplified online sign-up process for salons.
- Implemented service showcase feature for salons.
- Integrated review system for customers.
- Facilitated buying and selling of salons on the platform.
- Gained valuable experience as a Trainee Developer, learning website development and teamwork.

❖ **Skilli** - <https://skillapp.demoproject.info/>

- Developed a two-part platform for coaches and students.
- Enabled students to request coaches, share learning materials, and subscribe to coaching services.
- Established an admin panel for managing coaches and students, featuring intuitive data charts.
- Implemented personal messaging and group announcements for effective communication.
- Designed and integrated RESTful APIs for smooth data exchange between front-end and back-end components.

❖ **PDFMate**

- Developed APIs for user authentication, including standard and social login functionalities, to ensure secure access.
- Implemented document conversion API using LibreOffice to convert PDFs to various document formats seamlessly.
- Created an API for PDF optimization with customizable compression levels (low, medium, high, default) using the Ghostscript library.
- Enhanced performance and user experience by optimizing backend processes for efficient PDF handling.

❖ **Katalog** - <https://easy-events.demoproject.info/admin/login>

- Built a Laravel 12-based platform with Vue.js starter kit, enabling users to search for car parts by vehicle registration number.
- Developed features for adding products to the cart and submitting them to the admin for custom quotes.
- Created a comprehensive admin panel, inspired by Magento, for managing stock, product attributes, categories, subcategories, and users.
- Implemented group-based user management with special discount features for specific customer groups, enhancing personalization and sales.

❖ **Event Management** - <https://easy-events.demoproject.info/admin/login>

- Developed APIs and backend functionality for an event management project, enabling the admin to create QR codes.
- Implemented a system where an admin can create any number of QR codes and Share the links via WhatsApp.
- Users can scan QR codes to track food preferences, conference meetings, and gate invitations, all limited to one-time access.
- Ensured smooth functionality for tracking guests' food collection, invitations, and conference attendance.
